## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Claims 1-41 are presented for examination.

***Claim Rejections - 35 USC ' 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 30 and 32 are rejected under 35 U.S.C. § 103 (a) as being unpatentable over Park patent no. 6,963,523, in view of Takano et al. pat-no.5,448,728.

Art Unit: 2138

4. As to claims 30 and 32, Park teaches the invention substantially as claimed, including a well known recording method for optical recording medium comprising recording repeatedly defect information regarding data, which is recorded in a data area of the disc per recording operation, as defect information in a DMA that is present at least one of a lead-in area or a lead-out area of the disc, and record management information for managing the defect information as defect management information in the DMA [see Fig. 1 and col. 1 lines 42-53].

Takano does not explicitly teach a recording apparatus comprising a recording/reading unit that records data on or reads data from disc and a controller that controls the recording/reading unit.

However, a recording apparatus comprising a recording/reading unit that records data on or reads data from disc and a controller that controls the recording/reading unit is well known in the art such as the recording apparatus of Fig. 1 taught by Takano [see col. 5 lines 36-50].

It would have been obvious to one of ordinary skill in the Data Processing art at the time of the invention was made to combine the teachings of Park and Takano by applying the recording method disclosed by Park for the apparatus taught by Takano. This modification would have been obvious and a person having ordinary skill in the art would have been motivated to do so because it would enhance the teaching Takano by protect the DMAs data [see Park col. 1 line 45-46].

***Allowable Subject Matter***

5. Claims 1-29, and 34-41 are allowed.
6. Claims 31 and 33 are objected to as being dependent upon a rejected base claims, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

7. The prior art of record and not relied upon is considered pertinent to applicant's disclosure.
